

Derivative
Formula

When. $y = f(x)$, $y = g(x)$ functions are

$$\cdot y = C \Rightarrow y' = 0$$

$$\cdot y = x^n \Rightarrow y' = nx^{n-1}$$

$$\cdot y = cf(x) \Rightarrow y' = cf'(x)$$

$$\cdot y = f(x) \pm g(x) \Rightarrow y' = f'(x) \pm g'(x)$$

$$\cdot y = f(x)g(x) \Rightarrow y' = f'(x)g(x) + f(x)g'(x)$$

Let $f(x) = x^2$
Let $g(x) = x^3$
